### 'selective electron beam melting of an aluminum bronze

May 28th, 2020 - 1 introduction since the early 20th century there has been intensified research in the field of copper bronzes with their main addition being aluminum owing to the excellent corrosion resistance caused by the formation of a dense and stable passive al<sub>2</sub>o<sub>3</sub> layer the corrosion resistance is dependent on the amount of aluminum in the alloy those bronzes also show high strength wear'

### 'bronze

~~April 26th, 2020 - bronze is an alloy consisting primarily of copper monly with about 12-12.5 tin and often with the addition of other metals such as aluminium manganese nickel or zinc and sometimes non-metals or metalloids such as arsenic phosphorus or silicon these additions produce a range of alloys that may be harder than copper alone or have other useful properties such as stiffness ductility"~~**fabrication Metals Amp Metallurgy Knovel**
