'stone functor

March 28th, 2020 — in mathematics the stone functor is a functor $S: \text{Top} \rightarrow \text{Bool}$ where Top is the category of topological spaces and Bool is the category of boolean algebras and boolean homomorphisms it assigns to each topological space X the boolean algebra $S(X)$ of its clopen subsets and to each morphism $f: X \rightarrow Y$ in Top a continuous map $f^*: S(Y) \rightarrow S(X)$ the homomorphism $S(f)$.

'natural transformation

June 3rd, 2020 - in category theory a branch of mathematics a natural transformation provides a way of transforming one functor into another while respecting the internal structure i.e. the position of morphisms of the categories involved hence a natural

transformation can be considered to be a morphism of functors indeed this intuition can be formalized to define so called functor categories' '**abstract and concrete categories the joy of cats by jirí**
